Thank you very much for purchasing a Concord Pulse Oximeter.

This Manual describes the Pulse Oximeter’s features and requirements, functions, specifications, correct methods for transportation, installation, usage, operation, repair, maintenance and storage, as well as the safety procedures to protect both the user and equipment. Please read and follow the User Manual carefully before using this product. Failure to follow the User Manual may cause measuring abnormality, equipment damage and human injury. The manufacturer is NOT responsible for the safety, reliability and performance issues and any monitoring abnormality, human injury and equipment damage due to improper use. The specific products you received may not be exactly as described in this User Manual. This product can be used repeatedly for sports and aviation use. If you have any questions regarding the use of this product, please call us at 888-970-2999 Monday-Friday from 8:00 AM to 5:00 PM Central Time.

Measurement Principle

Principle of the oximeter is as follows: A mathematical formula is established making use of Lambert Beer Law according to Spectrum Absorption Characteristics of Reductive hemoglobin (HbR) and Oxyhemoglobin (HbO2) red and near-infrared zones. Operation principle of the instrument: Photodetector Oxyhemoglobin Inspection Technology adopted in accordance with Capacity Pulse Scanning and Recording technology, so that two beams of different wavelength of lights (966mm red and 955nm near infrared light) can be focused onto a human nail tip through a clamping finger-type sensor. A measured signal obtained by a photosensitive element, will be shown on the oximeter’s display through electronic circuits and a microprocessor.

Diagram of Operation Principle

1. Red and Infrared-ray Emission Tube
2. Red and Infrared-ray Receptor Tube

Precautions For Use

1. Before use, carefully read the manual.
2. Check the main unit and all accessories periodically to make sure that there is no visible damage that may affect user’s safety and monitoring performance. It is recommended that the device be inspected once a week.
3. The fingertip pulse oximeter must be able to measure the pulse properly to obtain an accurate SpO2 measurement. Verify that nothing is hindering the pulse measurement before relying on the SpO2 measurement.
4. Keep the oximeter away from dust, vibration, corrosive substances, explosive materials, high temperature and moisture.
5. Do not use the fingertip pulse oximeter in an explosive atmosphere.
7. The fingertip pulse oximeter is intended only for sports and aviation monitoring.
8. Do not sterilize the device using autoclaving, ethylene oxide sterilizing, or immerse the device in liquid. The device is not intended for sterilization.
9. Follow local ordinances and recycling instructions regarding disposal or recycling of the device and device components, including batteries.
10. This equipment complies with IEC 60601-1-2:2007 for electromagnetic compatibility for electrical equipment and/or systems. However, because of the proliferation of radio frequency transmitting equipment and other sources of electrical noise in the environment, it is possible that high levels of such interference due to close proximity or strength of a source might disrupt the performance of this device.
11. Portable and mobile RF communications equipment can affect electrical equipment.
12. This equipment should not be used adjacent to or stacked with other equipment.
13. It may be unsafe to:
   - use accessories, detachable parts and materials not described in the instructions for use
   - interconnect this equipment with other equipment not described in the instructions for use
   - use this equipment, repair or modify the equipment.
14. These materials that contact with the users skin contain medical silicone and ABS plastic enclosure all pass the ISO10993-5 biocompatibility cytotoxicity and ISO10993-10 tests for irritation and delayed-type hypersensitivity.

Calibration

It is not for continuous monitoring.

Inaccurate measurements may be caused by:

1. Significant levels of dysfunctional hemoglobin (such as carboxy - hemoglobin or methemoglobin).
2. High ambient light. Shield the sensor area if necessary.
3. Excessive user movement.
4. High-frequency interference.
5. Poor blood perfusion.
6. Placement of a sensor on an extremity with a blood pressure cuff.
7. Finger nail polish or false fingernails.
8. Weak pulse quality.
9. Low hemoglobin.

Product Features

1. Simple to operate and convenient to carry.
2. Small volume, lightweight and low power consumption.
3. Dual color OLED displays SpO2, PR, Pulse bar, and waveform.
4. Level 1-10 adjustable brightness.
5. 6 display modes.
6. 2pcs AAA-size alkaline batteries; battery-low indicator.
7. When no or low signal is detected, the pulse oximeter will power off automatically in 8 seconds.

Intended Use

Fingertip pulse oximeter is a portable non-invasive device intended for spot-checking of oxygen saturation of arterial hemoglobin (SpO2) and pulse rate of adult and pediatric users in sports and aviation settings.

Operation Instructions

1. Install two AAA batteries according to the Battery Installation instructions.
2. Place one of your fingers into the rubber opening of the pulse oximeter.
3. Press the switch button once on front panel to turn the pulse oximeter on.
4. Keep your hands still for the reading. Do not shake your finger during the test. It is recommended that you do not move your body while taking a reading.
5. Read the data from the display screen.
6. Press the power switch for longer than one second, will adjust the brightness of the oximeter. There are 10 levels of brightness. The default is level four.

After turning on the Oximeter, each time you press the power switch, the Oximeter will switch to another display mode. There are 6 display modes shown as follows:

1. 98 77
2. 95 84
3. 97 74
4. 95 84
5. 97 74
6. 97 74

Battery Installation

1. Install two AAA batteries into the battery compartment. Match the plus (+) and minus (-) signs in the compartment. If the polarities are not matched, damage may be caused to the oximeter.
2. Slide the battery door cover horizontally along the arrow shown as the picture.

Notes:
- Please remove the batteries if the oximeter will not be used for long periods of time.
- Please replace the battery when the power indicator starting flickering.

Using the Lanyard

1. Thread thinner end of the lanyard through the hanging hole.
2. Thread thicker end of the lanyard through the threaded end before pulling it tightly.

Warnings:
- Keep the oximeter away from young children. Small items such as the battery door, battery, and lanyard are choking hazards.
- Do not hang the lanyard from the device’s electrical wire.
- Please notice that the lanyard which is tied to the oximeter may cause strangulation due to excessive length.

Maintenance and Storage

1. Replace the batteries in a timely manner when low voltage lamp is lighted.
2. Clean surface of the fingertip oximeter before it is used in diagnosis for users.
3. Remove the batteries if the oximeter is not operated for a long time.
4. It is best to store the product in -20°C to 5°C and ≤ 93% humidity.
5. Keep the device dry. Extreme moisture may affect oximeter lifetime and may cause damage.
6. Dispose of battery properly; follow any applicable local battery disposal laws.

Cleaning the fingertip pulse oximeter

Please use medical alcohol to clean the silicone touching the finger inside of oximeter with a soft cloth dampened with 70% isopropyl alcohol. Also clean the being tested finger using alcohol before and after each test.

Do not pour or spray liquids onto the oximeter, and do not allow any liquid to enter any openings in the device. Allow the oximeter to dry thoroughly before reuse.

The fingertip pulse oximeter requires no routine calibration or maintenance other than replacement of batteries.

The use life of the device is five years when it is used for 15 measurements every day and 10 minutes per one measurement. Stop using and contact local service center if one of the following cases occurs:
- An error in the Possible Problems and solutions is displayed on screen.
- The oximeter cannot be powered on in any case and not the reasons of battery.
- There is a crack on the oximeter or damage on the display resulting readings cannot be identified; the spring is invalid; or the key is unresponsive or unavailable.

Specifications

1. Display Type: OLED display
2. SpO2
   - Display range: 0%–100%
   - Measurement range: 70%–100%
   - Accuracy: 70%–100%: 2% ± 0% – 9% ± 60% Resolution: 1%
   - AVO2 Value Analysis

Bland-Altman plot analysis of sampled data points on all subjects as below

Note: A functional tester cannot be used to assess the accuracy of a pulse oximeter monitor or sensor. Clinical testing is used to establish the SpO2 accuracy. The measured arterial hemoglobin saturation value (SpO2) of the sensors is compared to arterial hemoglobin oxygen (SaO2) value, determined from blood samples with a laboratory CO-oximeter. The accuracy of the sensors in comparison to the CO-oximeter samples measured over the SpO2 range of 70%–100%. Accuracy data is calculated using the root-mean-squared (Arms) value for all subjects, per ISO 9199:2005, Medical Electrical Equipment - Particular requirements for the basic safety and essential performance of pulse oximeter.

A functional tester is used to measure how accurately Fingertip Pulse Oximeter is reproducing the specified calibration curve and the PR accuracy.

The model of functional tester is index F2 FLUKE simulator and the version is 2.1.3.

3. Pulse Rate
   - Display range: 30bpm–250bpm
   - Measure range: 30bpm–250bpm
   - Accuracy: 30bpm–99bpm, ± 2.2bpm; 100bpm–250bpm, ± 2%
   - Resolution: 1bpm

Note: The information about wavelength range can be especially useful to clinicians.
5. Power Requirements
Two AAA alkaline batteries
Power consumption: Less than 25mA
Battery Life: Two AAA 1.5V, 800mA alkaline batteries could be continuously operated as long as 16 hours.

6. Environment Requirements
Operation Temperature: 5° - 40°C
Storage/Transport Temperature: -20° - 55°C
Ambient Humidity: <80% no condensation in operation; <93% no condensation in storage/transport
Atmosphere pressure: 86-1060Pa

7. Equipment data update period
As shown in the following figure. Data update period of slower average is 8s.

8. Classification
According to the type of protection against electric shock: INTERNALLY POWERED EQUIPMENT.
According to the degree of protection against electric shock: TYPE BF APPLIED PART, (applied part: the rubber hole of the device);
According to the mode of operation: CONTINUOUS OPERATION

Possible Problems and Solutions
